

RODERICK L. BREMBY, SECRETARY

KATHLEEN SEBELIUS, GOVERNOR

Date

More Fun Pipeline Company P.O. Box 11111 Happy, Texas 77251-1188

Dear Sir/Madam:

The natural gas industry has recently been working with state agencies throughout the country concerning flash emissions from tanks and/or processes associated with flash emissions. Flash emissions appear to contain quantities of volatile organic compounds (VOCs) and hazard air pollutants (HAPs) greater than major source thresholds. Information provided indicates that these tanks may be located at natural gas compressor stations, natural gas processing plants, crude petroleum liquid storage facilities, etc.

After review and discussion of this issue with the Clean Air Act Advisory Group, the Kansas Department of Health and Environment (KDHE) is requesting that your company re-evaluate potential VOC and HAP flash emissions from tanks and/or processes associated with flash emissions. Enclosed is a worksheet to be completed for any tank operated in Kansas. Please copy this worksheet if necessary. Facilities determined to be below permitting thresholds (40 tons per year VOC, 10 tons per year of any single HAP, 25 tons per year combined HAPs) from the re-evaluation, are required to submit this worksheet only. Facilities that are determined to be above permitting thresholds are required to submit this worksheet and detailed emission calculations, and a compliance plan/schedule.

The compliance plan/schedule should include the date the construction permit application and/or the operating permit application will be submitted, and if applicable, how potential prevention of significant deterioration (PSD) issues will be addressed. These worksheets and/or compliance plans/schedules are to be submitted to Ms. Cheryl Evans, Compliance and Enforcement Section, Bureau of Air and Radiation, KDHE, 1000 SW Jackson, Suite 310, Topeka, KS 66612-1366 no later than June 30, 2007.
